NEW DATA ON THE TENSILE STRENGTH OF PAPERS. [Sep 60] 3 p. (14 figs. 2 graphs omitted) 19 refs.
Order from SLA mf$2.40, ph$3.30 61-10207

Trans. of the Papier (West Germany) 1959, v. 13, no. 23/24, p. 553-592.

A new apparatus is described which enables the stress-strain properties of paper to be determined within the total range of solids contents of 13 to 90%. The device functions with a constant rate of extention which can be varied over wide limits. The flow behaviour of individual paper webs was studied, and an investigation was made of the influence exercised by [illegible] on the characteristics of the compression curve and elongation occurring during beating on the relationship between solids content and tensile strength. The [illegible]

STIFFNESS TESTING OF PAPER, CARTON, AND BOARD. [II]. Apr 61. 12p. (12 figs. omitted). 61-16464
Order from SLA $1.60

Trans. of das Papier (West Germany) 1960, v. 14, no. 9, p. 414-422.

DESCRIPTORS: *Paper, Mechanical properties, Test equipment, Stresses.

It was found that the majority of the different procedures and instruments characterise rigidity only on a relative basis and indirectly. The fundamental difference in the bending behaviour of elastic and elasto-plastic materials was theoretically demonstrated and it was shown that a distinction has to be made between two cases when subjecting paper to bending stresses. One case is characterised by such slight bending of the sample that the strain at the sample surface does not exceed the region (Materials--Paper, TT, v. 6, no. 6) (wet)

Bredov, M. M. and Okuneva, N. M.
CONCERNING THE DEPTH OF PENETRATION OF MEDIUM-ENERGY IONS INTO A SUBSTANCE (O Glubine Proniknoveniya Ionov Srednikh Energiy v Veshchestvo). 9 Nov 60 [5]p. 6 refs. MCL-345/1. Order from LC or SLA ml$1.80, ph$1.80 61-19362

Rough draft transl. of Akademiya Nauk SSSR. Doklady. 1957, v. 113, no. 4, p. 795-796.

Cesium ions of about 4 kiloelectron volts (Kev) energy penetrate into germanium to a depth of about 0.1 μ and this effect is related to their kinetic energy. This depth of penetration may be governed by the diffusion mechanism, connected with micro-heating at the expense of the deceleration of the given particle, which in the first moments disseminates in a relatively small (in series of several tens of atomic dimensions) area of the solid body.

(Nuclear Physics--Particles, TT, v. 5, no. 10)
